**Vienna, VA (June 30, 2010)** - Futrend Technology has been growing by leaps and bounds. As part of our on-going effort to improve our infrastructure, prepare for the next level of growth, and become a more professionally managed company, we implemented an applicant tracking system (ATS) to enhance the efficiency, effectiveness, and quality of the end-to-end recruiting/hiring process.

The system, called HRsmart, enables Futrend to streamline the recruiting process by reducing days to hire, managing job openings more efficiently, and supporting bidding. The new standardized end-to-end recruiting process will enable Futrend to proactively build a pipeline of potential candidates in anticipation of the rapid growth we expect over the next several years. Because of its adaptability, Futrend will be able to implement additional functionalities to its human resources program. For example, a performance management module will be used to evaluate and manage the competencies, skills and performance of all Futrend employees. It will enhance employee development with a more formal systematic approach.

ATS also automates Futrend's Employee Referral Program, which rewards staff for identifying job candidates who are subsequently hired. By inputting resumes into the ATS database, Futrend will be able to track inventory skill sets and match them with future projects, proposals, and job openings which improves our agility and delivery capability.
